

LOOKING FOR ACADEMIC RESEARCH EXPERIENCE THIS SEMESTER?

The Infant Cognition Lab at UMass Amherst (*directed by Dr. Erik Cheries*) is offering a limited number of research positions for the academic year. These are volunteer positions that provide students with valuable lab training in developmental psychology (and a good letter of recommendation).

Research Topics

Our studies explore how infants and young children perceive and think about the world around them. Current studies explore:

- Moral Reasoning and how infants interpret the intentions and actions of others
- How infants track the identity of objects and people over time
- Number Concepts prior to language
